Operational environments are under constant pressure.

Rising costs. Labour shortages. Compliance scrutiny. Throughput demands that increase year on year.

In high-volume warehousing and logistics operations, safety and efficiency are not separate priorities, they are directly linked to profitability.

Your site cannot afford disruption.

Fastline Services partners with warehousing, logistics and industrial operators across the UK to create

safer, more efficient, high-performing operational environments.

- We do more than install safety systems
- We protect productivity
- We reduce avoidable downtime
- We optimise operational flow
- We exist to keep your operation moving

Who we are

Fastline Services is a UK-wide specialist in warehouse safety infrastructure, including:

- | Impact protection systems
- | Line marking solutions
- | Surface and flooring systems
- | Traffic management infrastructure

Our in-house installation teams deliver compliant, high-quality and durable solutions that protect people, assets and operational continuity.

What differentiates Fastline is our operational understanding.

We do not simply see barriers, markings and coatings.

We see:

- | Movement patterns affecting throughput
- | Bottlenecks slowing productivity
- | High-risk impact zones
- | Surface degradation increasing maintenance spend
- | Compliance exposure
- | Recurring damage trends
- | Hidden cost leakage

Every solution we design is informed by how your site operates, not just what needs installing.

Why Fastline

You do not need another contractor. You need a partner who understands:

- | The real cost of downtime
- | The operational impact of asset damage
- | The risk created by poor traffic segregation
- | The hidden expense of inefficient layouts
- | The commercial consequences of non-compliance

Fastline operates with a performance-first mindset.

We focus on measurable outcomes:

- | Reduced safety incidents
- | Reduced reactive repair costs
- | Reduced operational disruption
- | Improved traffic flow
- | Extended floor and asset lifespan
- | Increased site efficiency

Every recommendation is built around operational improvement, not installation volume.

Our Impact

Established in 2016

Delivering reliable, high-performance safety infrastructure solutions across the UK since 2016.

Experienced Team

Over 50+ years combined industry experience across warehouse safety, impact protection and operational site performance, delivered by our dedicated in-house specialists.

Nationwide Coverage

Supporting warehousing, logistics and industrial operations across the UK with multi-site capability.

Proven Track Record

Hundreds of installations delivered successfully, from targeted upgrades to large-scale distribution facilities.

Trusted by Leading Brands

Proud to support organisations including Amazon, DHL, Aldi and Euro Car Parts.

Performance-Driven Approach

Focused on reducing downtime, preventing avoidable damage and optimising operational flow for measurable commercial results.

Our Approach

A structured, performance-led process built around operational continuity.

1 Assess

We evaluate your site from an operational perspective, not simply a product requirement.

2 Identify

We highlight risk exposure, inefficiencies and recurring damage patterns impacting productivity.

3 Recommend

We propose practical, cost-effective improvements using proven, high-performance systems.

4 Deliver

Our specialist in-house teams install with precision, compliance and minimal operational disruption.

5 Support

We remain a long-term partner as your site evolves.

Operational Technology and Site Intelligence

Modern warehouse performance relies on visibility, control and informed decision-making. Fastline supports operations teams through structured, data-led performance insight.

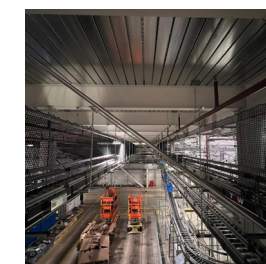

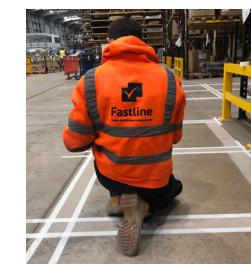

We provide:

- ▮ Data-driven safety reviews
- ▮ Impact trend analysis
- ▮ Recurring damage pattern reporting
- ▮ Traffic flow optimisation insight
- ▮ Compliance gap identification
- ▮ Structured reporting for operational leaders

Enabling you to:

- ▮ Make evidence-based safety investments
- ▮ Reduce recurring repair costs
- ▮ Improve long-term infrastructure planning
- ▮ Strengthen audit readiness
- ▮ Protect capital assets

We bridge the gap between physical infrastructure and operational strategy.

A highly recommended and trusted partner – Fastline delivers a quality service every time.

CDB Ltd – Director

Core Solutions

Site Safety and Impact Protection PAS 13 Compliant Solutions

We supply and install:

- Barrier systems
- Racking protection
- Bollards
- Guarding
- Pedestrian segregation systems

We deliver industry-leading systems engineered for demanding operational environments.

Internal and External Line Marking

Clear visual communication drives safe and efficient movement. We deliver durable marking systems defining:

- Traffic routes
- Pedestrian walkways
- Hazard zones
- Loading areas
- Segregation points

Professional line marking improves workflow clarity, strengthens compliance and reduces preventable incidents.

Operational support and site performance review

High-performing warehouses are engineered, not accidental. A single day of disruption can cost thousands in lost productivity. Repeated impact damage and unclear segregation quietly erode margins over time.

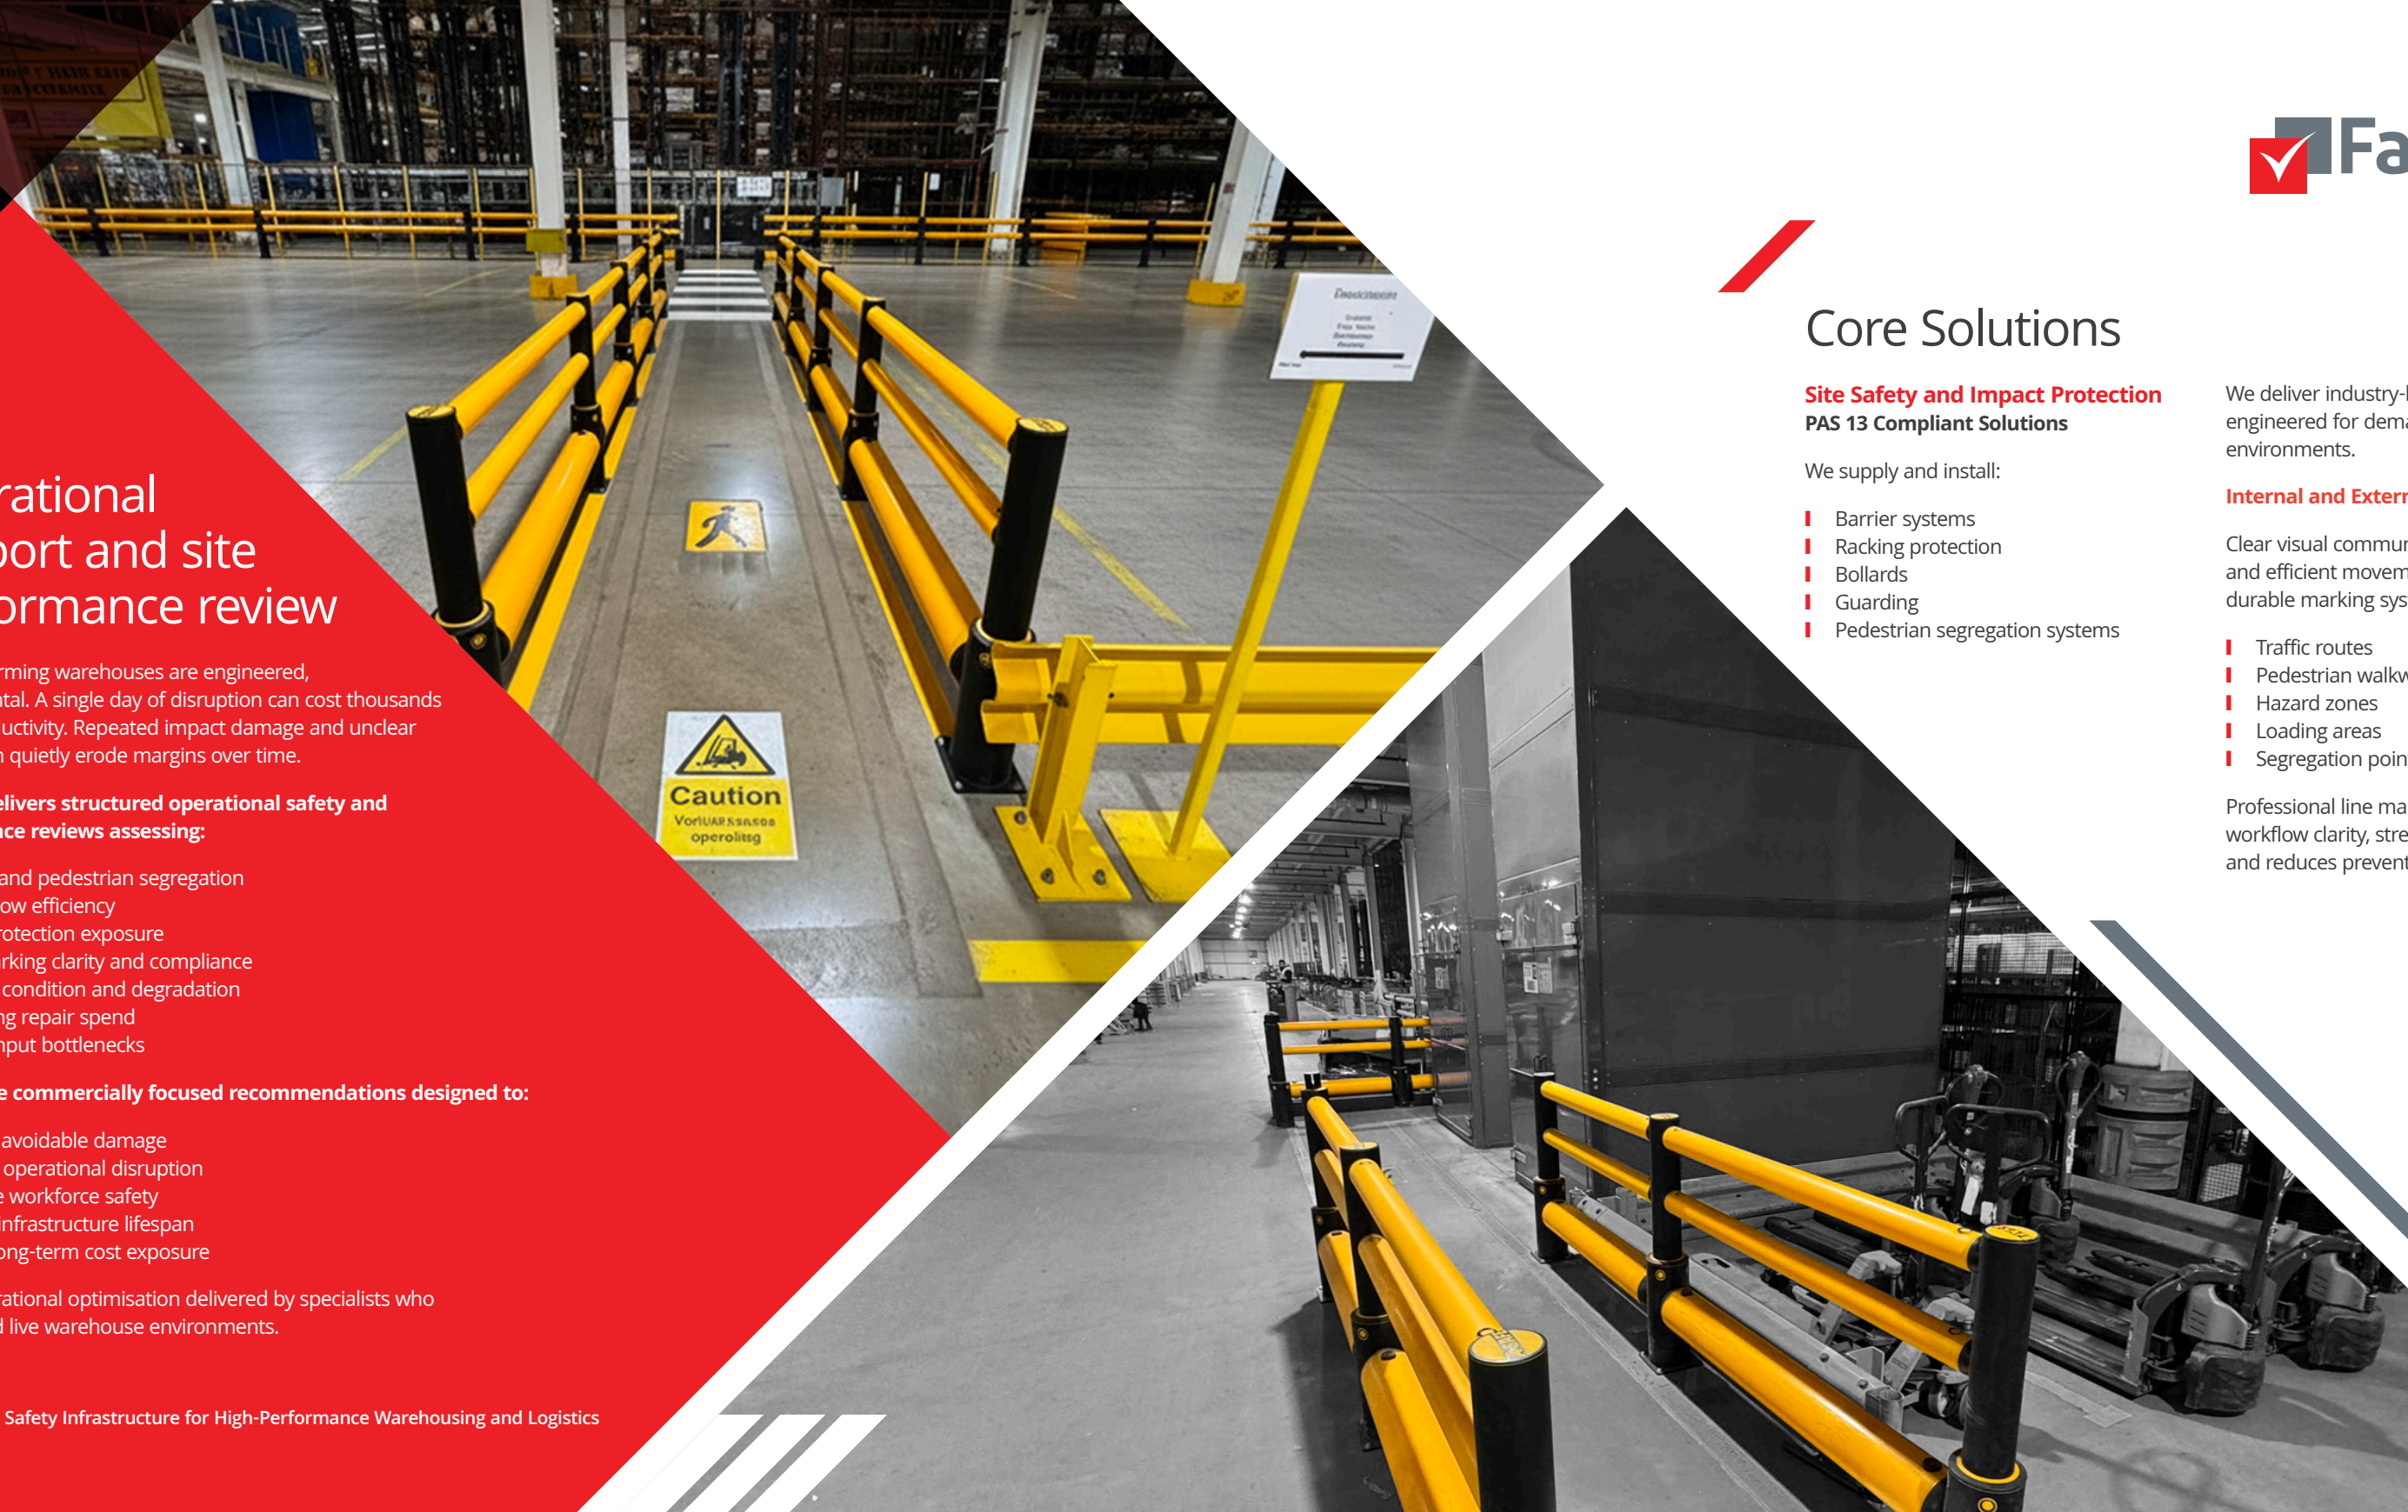

Fastline delivers structured operational safety and performance reviews assessing:

- Vehicle and pedestrian segregation
- Traffic flow efficiency
- Asset protection exposure
- Line marking clarity and compliance
- Surface condition and degradation
- Recurring repair spend
- Throughput bottlenecks

We provide commercially focused recommendations designed to:

- Reduce avoidable damage
- Prevent operational disruption
- Improve workforce safety
- Extend infrastructure lifespan
- Lower long-term cost exposure

This is operational optimisation delivered by specialists who understand live warehouse environments.

Core Solutions

Surface, Flooring and Slip-Resistant Systems

Damaged floors are more than cosmetic issues. They introduce risk, slow operations and accelerate equipment wear.

We deliver:

- | Concrete repairs
- | Slip-resistant surfacing systems for high-risk operational areas
- | Surface preparation
- | Line marking removal
- | Epoxy and specialist floor coatings

Designed to restore structural integrity, improve underfoot safety and extend long-term asset lifespan.

Traffic Management and Site Control

We install practical traffic management infrastructure including:

- | Speed reduction systems
- | Wheel guides and stops
- | Traffic mirrors
- | Safety signage
- | Dock door safety systems

All designed to support smoother movement, safer navigation and reduced operational risk.

What this means for you

Partnering with Fastline Services delivers measurable operational improvement:

- Fewer reactive repairs
- Fewer operational interruptions
- Lower long-term damage costs
- Safer working environments
- Stronger compliance positioning
- Greater confidence in site performance

We align with your operational and commercial goals, not just your installation brief.

Trusted Manufacturing Partners

We work with industry-leading manufacturers to ensure durability, compliance and innovation in every installation.

Our partnerships provide:

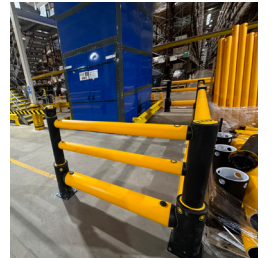

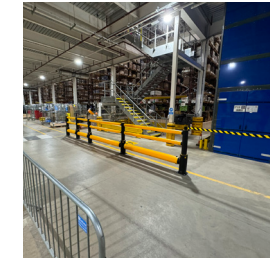

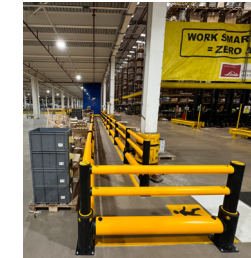

- Proven performance
- Long-term reliability
- Reduced maintenance requirements
- Confidence in system integrity

Premium products. Expert installation. Operational insight.

Any floor demarcation, external, internal, advice, racking solutions/ protection – get in touch with Andy at Fastline Services – very helpful, pragmatic and knowledgeable maintenance work, floor repairs – Andy and his team have the resources to support and protect you. Any queries fitting them – give Andy a call – Fastline Services will support!

Aalberts – IPS UK HSE Manager

Case Study Snapshot

Euro Car Parts (LKQ) – T2 Facility Safety Enhancement

The Challenge

A high-throughput distribution facility required enhanced traffic segregation, improved impact protection and clearer operational flow, without disrupting output.

Our Solution

Fastline conducted a structured operational review, identifying impact hotspots and movement inefficiencies,

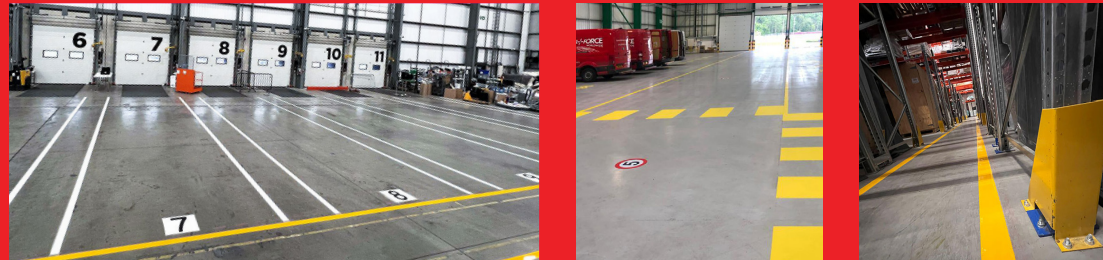

We implemented:

- ▮ PAS 13-aligned barrier systems
- ▮ Enhanced pedestrian and vehicle segregation
- ▮ High-clarity line marking systems
- ▮ Targeted protection in high-risk impact zones

The Outcome

- ▮ Improved traffic flow
- ▮ Reduced asset vulnerability
- ▮ Strengthened compliance positioning
- ▮ Installation delivered with minimal operational disruption

A practical, performance-led safety enhancement within a live logistics environment.

Our Commitment

Fastline Services operates with a safety-first culture and long-term partnership mindset.

We understand your warehouse is not simply a building, it is a revenue-generating operational asset.

Our responsibility is to protect it.

Through practical expertise, dependable delivery and performance-focused solutions, we help you build safer sites and stronger operations.

Fastline have been really supportive in how they can bring the site to life and the quality of work is fantastic, everyone has commented on it so far! Having worked in logistics for 20 years it's by far the best I've seen.

Alistair Phinn
URBnSupply – Chain Manager

Let's Build a Safer, Smarter Operation

Whether you require targeted infrastructure upgrades or a full operational performance review, Fastline Services is ready to support your site with experience, precision and professionalism.
